Honda's first production V6 was the C series; it was produced in displacements from 2.0 to 3.5 liters. The C engine was produced in various forms for over 20 years (1985–2005), having first been used in its then new Legend model, and its British sister car the Rover 800-series (and Sterling). How does the catalytic converter work? The catalytic converter has multiple sections, commonly referred to as beds. Each contains specific catalyst elements that work at a temperature of at least 400 degrees F to promote specific chemical reactions. The average cost for a Mini Cooper engine coolant temperature sensor replacement is between \$122 and \$213. Labor costs are estimated between \$61 and \$134 while parts are priced between \$61 and \$79. - 2009 Acura TL Fuel Catalyst Manual
