

Download Nextraction Announces Initial Flow Rates For Noble 6-24 Well In North Pinedale Project

Nextraction and Vantage announced that the initial production flow rates and thirty day flow rates from the 13 - stage frac located only in the lower zones of the Noble #6-24 well have been completed. Nextraction reported that the completion of the Upper Lance and Tertiary zones of the Noble 6-24 well resulted in a flowed back rate of 4.853MMcfd over an 8-hour absolute open flow test at Pinedale. Nextraction is selling gas and condensate from its first successful well, the Nobel #6-24, that is currently undergoing initial flow back rate tests. The initial production tests from the Pinedale well provide information to enhance the reserve estimates for future updates to the reserve report. Nextraction holds 3,624 acres in a joint venture ...
