

Download Answers To Moon Phases

The moon itself doesn't emit any light like the sun. What we see when we see the moon is sunlight reflected off the moon. The phase of the moon is how much of the moon appears to us on Earth to be lit up by the sun. What causes the different phases of the Moon? The phases of the Moon depend on its position in relation to the Sun and Earth. As the Moon makes its way around the Earth, we see the bright parts of the Moon's surface at different angles. For webquest or practice, print a copy of this quiz at the Earth Science: Phases of the Moon webquest print page.
