case study as a research method 2 investigate contemporary real-life phenomenon through detailed contextual analysis of a limited number of events or conditions, and their relationships. In the social sciences and life sciences, a case study is a research method involving an up-close, in-depth, and detailed examination of a subject of study (the case), as well as its related contextual conditions. Emergence. Unlike the other approaches we discuss, case study research does not emerge from a particular social scientific tradition. Additionally, case studies can be qualitative and/or quantitative. Case studies are only one of many ways of doing social science research, with experimentation, observation, surveys and archival information (as mentioned above) each -
