

# Download Locus Problems With Answers

A locus is the set of all points (usually forming a curve or surface) satisfying some condition. For example, the locus of points in the plane equidistant from a given point is a circle, and the set of points in three-space equidistant from a given point is a sphere. About Loyola Learn more about Loyola's academic programs, campuses, schools, Jesuit Catholic tradition, and rankings as a top national university and a "best value" for education. 4 History of LOCUS Developed to combat problems of poor distribution of treatment resources and idiosyncratic treatment decisions.
