

# Download Solution Solvent Solute Example

Solvent is, in simplest terms, something in which you dissolve another substance (also called as solute) and this mixture will yield what we know as a 'solution'. In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. In our daily routine we come across variety of substances which are not pure but instead a homogeneous mixture of two or more pure substances. A solution in chemistry is a homogenous mixture of two or more substances. The substance which is dissolved is called a solute. The substance in which the solute is dissolved is called a solvent. - Solution Solvent Solute Example
